

Electronic Security

Electronic security systems can provide the highest level of surveillance and monitoring to locations of any size or type.

Gone are the days when a locked door and an alarm bell was sufficient protection for most locations; changes to the way police respond to alarms render more sophisticated solutions necessary if a location is to remain genuinely secure. Many premises must now be accessible to authorized personnel outside of normal operational hours, and the right electronic security solutions, either wired or wireless security, can eliminate the need for a security guard and even a Receptionist in these situations, offering potentially huge savings.

Retail locations are increasingly saturated with shoppers, increasing the need for a solution which allows retailers to remain alert and aware in an environment where even the most attentive staff members and security guards cannot be expected to see everything. Well-

designed security technology can cover awkward blind spots in a small store, or allow observation of hundreds of square feet across a busy hypermarket.

Our electronic security systems

Our electronic security expertise includes CCTV & IP CCTV, Video Analytics, Access Control, Intruder Detection and Automatic Number Plate Recognition. Our award winning rapid deployment security solution FreedomCAM is a fully-integrated device for maximum flexibility and versatility, providing immediate coverage virtually anywhere.

As specialists in IP CCTV we have the expertise to design, install, monitor and maintain systems to meet every security challenge, no matter the scale. The power of IP CCTV continues to grow as Video Analytics systems become increasingly advanced. Video Analytics applies a sophisticated algorithm to the content of the CCTV image to identify different types of movement and behaviour. This highly effective and extremely versatile solution can be modified in response to site changes and harnessed to provide other information to help improve Health and Safety, Marketing and Sales to name but a few, allowing for maximum return on investment.

Our access control and intruder detection systems ensure that your business is always protected; from simple door control systems and single alarms to fully integrated security solutions, we can provide the perfect fit for your needs. Our innovative Virtual Concierge access control system can provide all of the benefits of an on-site secretary at a fraction of the cost, while our Automatic Number Plate Recognition System can be incorporated in a range of innovative managed services to reduce or eliminate the need for guards.

We're not tied to any specific product or manufacturer, so we can provide truly impartial advice to help you find the perfect solution for your needs.

Intelligent remote monitoring

As a National Security Inspectorate ARC Gold and RVRC electronic security company, we remotely monitor CCTV, fire and intruder alarms, thoroughly investigating threats and providing fast response to provide you with the confidence of knowing that your site is in good hands.

We also offer environmental/plant monitoring to ensure that you're immediately alerted to any changes on your site and lone worker protection to help you meet Health and Safety requirements and provide peace of mind to employees and employers alike. Our Simple Network Management Protocol allows us to provide early warning on all connected devices to ensure that all business-critical systems run smoothly and minimise the impact of failure. Our Secure Delivery Reception service allows us to accept delivery onto your site without requiring

you to have the site manned, while a combination of access control and monitoring can enable you to manage contractors remotely, logging contractors in and out, verifying time on site and monitoring movements to support Health & Safety requirements.
