

## Security Gates

Security gates are the best solution for ensuring perimeter security while maintaining the smooth flow of vehicles and people. While the age-old worries of robbery and vandalism remain major concerns, newer risks such as data theft and threats to infrastructure now pose significant concerns.

Striking a perfect balance between accessibility and security can be the most troublesome part of perimeter security. In some situations the ideal solution offers the absolute minimum disruption and maximum accessibility. Other applications require the most stringent verification for authorized personnel and the resilience to prevent all forms of forced access.

In all applications, however, reliability and efficiency are critical, with robust and well-designed products reducing servicing time and protecting your bottom line as well as your perimeter.

## **Made to fit your needs**

Whether you need overnight security through simple and effective manually-operated metal security gates, or automatic security gates for continuous, intensive operation at high security locations, Gunnebo's gate security systems can be fully customized to fit your requirements perfectly.

We offer a complete, end-to-end service from the design to the manufacture, installation and ongoing servicing of our security gates. We offer our considerable experience at the planning stage and our high-trained, global network of engineers to support all installed solutions and ensure that any problems that may occur are fixed with the promptness and efficiency which is so critically required.

We're highly experienced in the deployment and maintenance of commercial security gates, industrial security gates and retail security gates. Combining reliability with excellent design and meeting the highest levels of European quality and safety, our range of TUV-approved gate designs ensure that you need not compromise on security or accessibility.

## **Our gates in application**

Gunnebo's variety of security gate systems and experience in producing customized solutions ensures that we have the perfect fit for every environment. Gunnebo's elegant SpeedStile Gates ensure the smooth flow of high volumes of people, using proven access control technology compatible with card readers, keypads and biometric systems. Customize these durable and reliable electric security gates further with your own choice of preferred materials, colours and lighting effects for a bespoke modern solution.

For high security perimeter protection, the unique design of Gunnebo's tracked steel security gates affords true bidirectional impact protection up to a tested width of 7m, making it ideal for critical infrastructure applications.

## **Types of security gates include:**

- Airport Security Gates
- Full-Height Turnstiles
- Half-Height Turnstiles
- Quick Folding & Sliding Gates
- Shop Turnstiles
- Ticket Gates
- Tripod Turnstiles
